

Alfresco Export Connector

Alfresco Export Connector

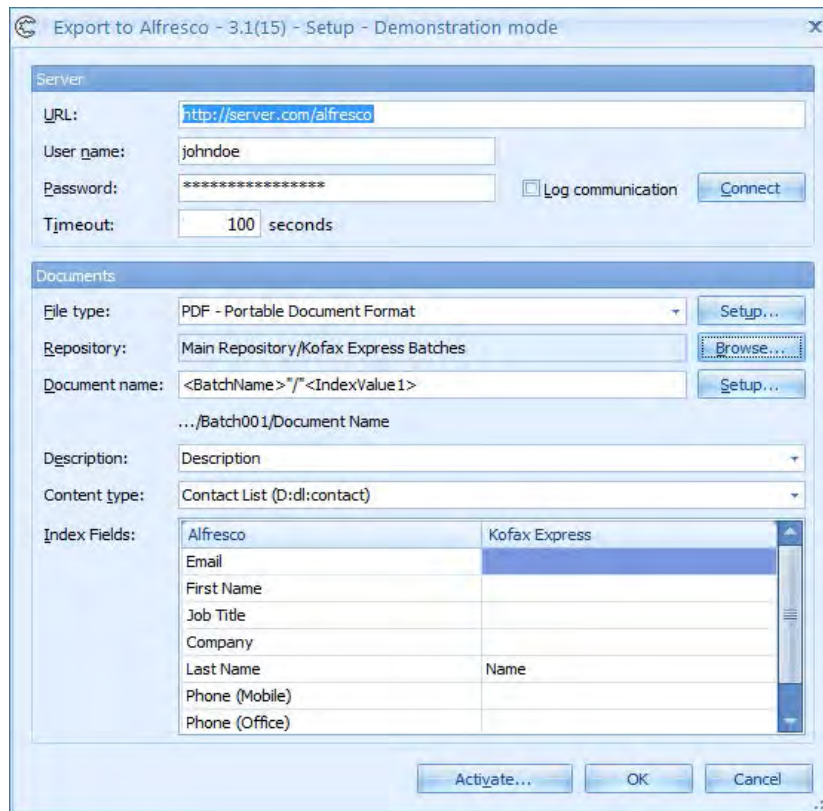

Enterprise-class document management at a fraction of the cost

Alfresco is an open source document management system. It is positioned as a single unified repository to manage any content – Documents, Images, Video and Audio.

With the CaptureBites™ Alfresco Export connector, it is possible to scan batches of documents, automatically index them with bar codes or OCR and export the documents as TIFF, PDF, PDF/A or super compressed PDF into Alfresco.

Alfresco setup screen :

The screenshot shows the 'Export to Alfresco - 3.1(15) - Setup - Demonstration mode' window. It is divided into two main sections: 'Server' and 'Documents'.

Server Section:

- URL:
- User name:
- Password:
- Timeout: seconds
- Log communication
-

Documents Section:

- File type: PDF - Portable Document Format (dropdown menu)
- Repository: Main Repository/Kofax Express Batches (dropdown menu)
- Document name: <BatchName>"/>
- Description: Description (dropdown menu)
- Content type: Contact List (D:d:contact) (dropdown menu)
- Index Fields: A table mapping Alfresco fields to Kofax Express fields.

Alfresco	Kofax Express

Buttons at the bottom: , ,

After connecting to an Alfresco server and selecting a Destination Repository, Kofax Express index fields can easily be mapped with Alfresco's custom fields.

Alfresco Export Connector

Browsing the Alfresco repository

To select the Destination Repository, the Alfresco connector communicates directly with the Alfresco server and shows a selection list of Destination Repositories for easy configuration.

Combine this Connector with CaptureBites MetaTool for Advanced Index Extraction and More

Use this connector in combination with CaptureBites MetaTool for advanced index extraction, keyword document separation, floating data extraction, multi-field and drill down database lookup and other advanced functionality.

To learn more about MetaTool, press any of the feature buttons below :

The MetaTool presents itself as a standard Kofax Express export connector and passes through extracted data and processed images to an export destination of choice such as Email, Folder Structure, FTP Server, Database, MS SharePoint Server & Online, Alfresco, OpenText Content Server, Xerox DocuShare, ViewBites or other DMS systems.
